

Kentucky Hospitals' **Economic Importance** to Their Communities

Kentucky Hospitals Statewide Report

Kentucky Hospitals' Economic **Importance to Their Communities**

Kentucky Hospitals

In every community, the local hospital is vitally important, not only for the health care services they provide, but for their contribution to the economy. The jobs and payroll generated by Kentucky's hospitals supply tax revenue to state and local governments, and support other Kentucky businesses through the purchase of goods and services. These dollars have a "ripple effect" as they move through the larger economy, supporting other businesses and jobs in the community as well as generating tax revenue used to fund state programs.

Kentucky Hospital Employee

Other Private Employee

The average Kentucky hospital employee paycheck is 25% higher than all other private employees in the state.

In 2016, Kentucky Hospitals

- Cared for 567,739 inpatients
- Welcomed 51,024 babies into the world
- Treated 2,426,218 patients in their ERs
- Had more than 7,906,993 outpatient visits

Local Spending

Funds spent by hospitals and their employees to buy goods and services flow to local businesses and then ripple throughout the economy

The hospitals generate nearly **\$3 billion** annually in purchases from local companies

The hospitals' employees spend an estimated **\$2.2 billion** in local purchases

TAX Revenue

Kentucky hospitals paid:

- \$96.4 million in city and county occupational taxes
- \$183 million in provider taxes to help support the Medicaid program that are matched with federal funds to support \$610 million in state Medicaid spending

Its employees generated:

\$390.6 million in income and sales taxes

Impact of Reductions

Since Kentucky hospitals are such an important part of the state and local economies, reductions in reimbursement from Medicare and Medicaid have a direct impact on the entire economy – not just the hospital.

A **10% change** in the hospital's net patient revenue due to cuts to government programs like Medicare and Medicaid, would:

Reduce hospital employee wages and salaries by approximately \$465 million and result in some combination of lost jobs and reduced pay per job in the broader community

Reduce state and local government tax revenue by nearly \$88.9 million

Cause a ripple effect to other businesses creating a loss of **\$2.3 billion** in regional sales and a reduction of nearly **\$676 million** in regional wages and salaries

The Economic Importance of Kentucky Hospitals
